

# Dehumidifier Consorb **CZ-82/102/102 L/104**

Dehumidifying capacity at 20°C / 60% RH  
**22 - 65 kg/h**

Dry air flow  
**3200 - 8000 m³/h**

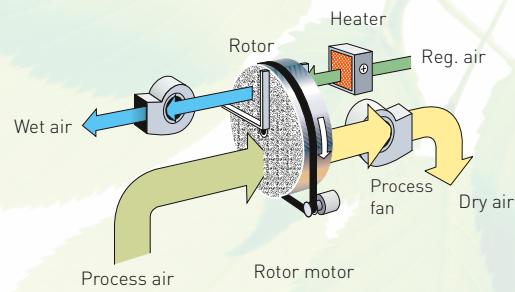

- Washable rotor
- No desiccant carry-over
- Suitable for high ambient water contents
- Long lifetime
- Excellent deep drying ability
- Option: hot-water coil for regeneration air pre-heating

## CORRECTION DIAGRAM

## TECHNICAL DATA

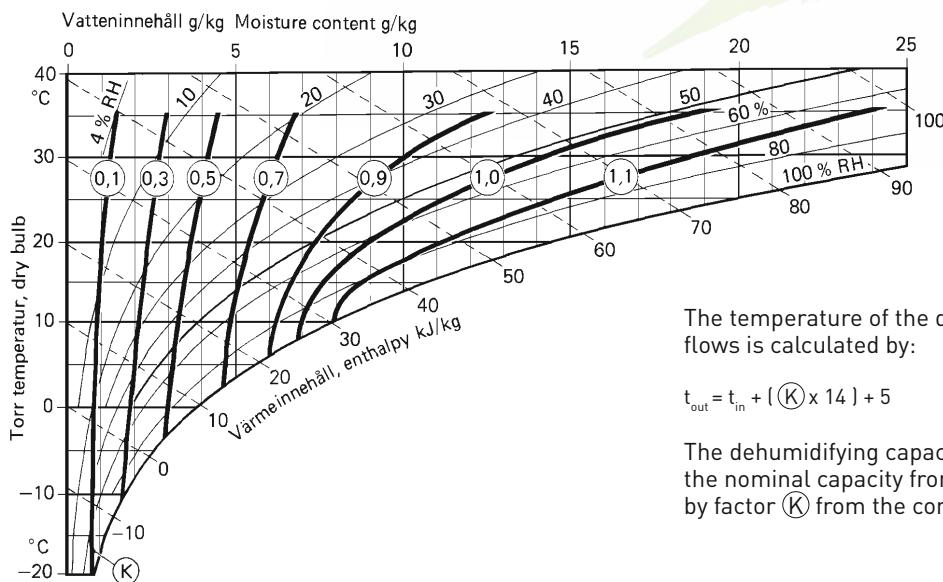

Dehumidifier model	CZ-82	CZ-102	CZ-102L	CZ-104
Nominal capacity <sup>1</sup> (kg/h)	22	36	50	65
Dry air flow <sup>2</sup> (m <sup>3</sup> /h)	3200	5200	7200	8000
at static pressure (Pa)	200	200	200	200
Wet air flow <sup>2</sup> (m <sup>3</sup> /h)	850	1400	2000	2500
at static pressure (Pa)	200	200	200	200
Heater power <sup>3</sup> (kW)	30	50	74	95
Max. electric consumption (kW)	34.1	54.5	81.7	106.5
Supply fuse 3x400V 50Hz [A]	63	100	160	200
Weight (kg)	600	800	850	900

<sup>1</sup> Valid for inlet conditions 20°C/ 60% RH. For other inlet conditions the capacity can be calculated by using the diagram shown below.

<sup>2</sup> Volume flow for density 1.20 kg/m<sup>3</sup>.

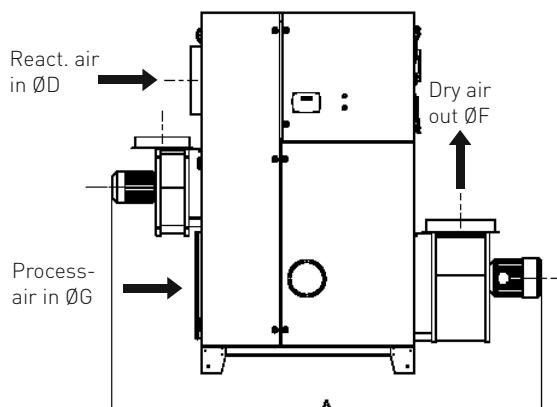

<sup>3</sup> Electric reactivation heater is standard. Steam and hot water is optional.

The temperature of the dry air at nominal air flows is calculated by:

$$t_{\text{out}} = t_{\text{in}} + (\textcircled{K}) \times 14 + 5$$

The dehumidifying capacity is estimated as the nominal capacity from above, multiplied by factor  $\textcircled{K}$  from the correction diagram.
